CONTROL DATA
CORPORATION

Dear Control Data Customer:

The NOS Full Screen Editor (FSE) will be available in the NOS
V2.2 release. This feature allows on-line full screen editing
as well as line editing. The Full Screen Editor allows the
inserting and changing of characters, moving and copying lines,
paging through a file, global locate and changing commands, and
supports split screen (multiple file) editing. There is also
the ability to UNDO any changes made to a file, procedures of
editor commands, word processing commands (paragraph fill, line
split and join, centering), and user programmable function keys.

The FSE provides both a high performance multi-user subsystem
and a conventional copy-per-user program. The multi-user
subsystem utilizes extended memory to provide hundreds of
terminals on a large mainframe with rapid response times.
Screen editing is supported on the CDC 721, CDC 722, DEC VT100,
and Zenith Z19 full screen terminals and line mode can be used
on other terminals.

There has been significant interest in the Full Screen Editor.
Control Data will be making the "copy-per-user" editor program
available as a feature supported on NOS V2.1. This feature
will be available through the regular licensing procedures.
The product number for the Full Screen Editor is:

    H8X5-37 for 170-800 series mainframes
    H7X0-37 for 170-700 series mainframes
    H521-37 for 170-17X, 7X, 6XXX, 176 mainframes

The Full Screen Editor is a successor product to XEDIT. Please
contact your CDC sales office for complete product information.

The NOS V2.1 product will be available July, 1983.

Sincerely yours,

CONTROL DATA CORPORATION
